## I

 TO ELIMINATE the confusion caused by the similarity of names of SEED-BEAN growing concerns in Santa Barbara County, California, Henry Fish Seed Company, Ltd., although established fifty-nine years ago, will, on February 1, 1934, change its name to McCrea Seed Company, Inc.

This entails no change in ownership, management, or the policies of the Company, but is a change in name only. All existing contracts of Henry Fish Seed Company, Ltd., will be carried through to completion by McCrea Seed Company, Inc., successor to Henry Fish Seed Company, Ltd.

## II

WE ANNOUNCE the introduction of McCrea's Lima Bean, a new Bush Lima of unusual merit. The plant is very stocky and upright, about the size of a Fordhook bush, with heavy stalk, big root-system, and large, dark green foliage. The pod is curved, about the size of a Henderson Bush pod in length and width, though much thicker, as the Bean is of the thick or potato type, like the Fordhook. These light green, or rather grey-green pods, are borne profusely in the heavy crown setting, with 3 to 5 very large, plump Beans so closely crowded in each pod that the pressure flattens the ends of the Beans. See photograph on page 4.

The unusual feature of this new variety is the remarkably sweet flavor of the Beans. We believe McCrea's Lima will be very popular for the home-garden and for canning. Vining and canning tests have given very satisfactory results. Although the pods are small, the large size of the Beans and their unusually sweet flavor should make this new variety popular with the market gardener.

Photographs of McCrea's Lima are shown on pages 4, 6, 7, and 8.
